Re: Inspection fees for projects within the City of Frederick

The Catoctin and Frederick Soil Conservation Districts will be increasing the fees for sediment and erosion control inspections on projects in the City of Frederick effective January 1, 2016. The new fees will be **3% of the cost of sediment and erosion controls or \$500 whichever is greater.**

Our inspection fees for the city have not increased since we were designated in 2000 by MDE to conduct inspections on projects within the city limits. We felt it was necessary to increase the fees to cover our increasing costs of conducting inspections. Please note the changes and adjust any fees for any new projects submitted after January 1, 2016. Any projects already in the review process will be grandfathered in at the current rates.

Please feel free to contact our office if you have any questions.
